For Immediate Release

UPDATE

MOLYBDENUM

1. Lennac Lake Molybdenum Project

Dentonia Resources Ltd. “Dentonia” has obtained a provincial Mine Act Work Permit, filed an Emergency Response Plan, deposited a \$3,000 bond and is in a position to commence a 10 hole drill program, consisting of 2,000m of drilling, at an estimated cost of \$250,000, some time in August. Dentonia has contacted the Babine First Nation Band and will continue to consult with the Band.

The Lennac Lake Prospect, located in the Babine Lake area of central British Columbia, is comprised of 68 claim units and has been explored since 1971 by various operators, including some majors.

The Lennac Lake property covers several zones of Cu-Mo mineralization associated with porphyritic phases of the Late Cretaceous Bulkley intrusions. These intrusions are of a similar age and composition to those that host the Yorke Hardy (Davidson) porphyry Mo deposit at Smithers, 48 kilometres to the west, and the operating Huckleberry porphyry Cu mine, 130 kilometres to the southwest. Although the west and east zones of Lennac Lake prospect have been tested by drilling, original drill logs and assays are not available and the potential of these zones is difficult to assess, particularly their overall Au content.

The newer southeast zone is untested by drilling and represents a significant under-explored exploration target. Isolated outcrops and trenches have exposed mineralization over a distance of 600 metres suggesting the potential for large deposits. Of particular importance is the occurrence of molybdenum bearing quartz vein stock workings in siliceous quartz-feldspar porphyry within this zone. This occurrence has been exposed by trenching in a relatively flat area with virtually no outcrop. The extent and overall grade of this mineralization is currently unknown and can only be evaluated by further exploration work, particularly diamond drilling.

The Lennac Lake property is ideally situated for potential development. A paved road and powerline are located within 5 kilometres of the property, and access to major rail and highway routes is only 30 kilometres to the southwest. In addition, the property covers relatively flat terrain covered by pine forest that is infected with pine beetle. Salvage logging will probably occur in the next few years thus opening up the area to further exploration. Finally, because of the flat terrain and shallow overburden, the stripping ratio for an open pit operation would be very low thus reducing mining costs.

Don MacIntyre, Ph.D., P.Eng, the optionor of the project, has been appointed project manager.

2. Don Project – Brittain River, Jervis Inlet

Consultation with Sechelt First Nation Band is continuing and an application for Mine Act Work Permit is pending. Dentonia has agreed to fund a preliminary field reconnaissance/archeological impact assessment survey (“PFR”) and has submitted a \$5,000 bond to the B.C. Government.

MOLYBDENUM PRICE

Molybdenum is at about US\$30/lb. To quote from The Northern Miner, issue July 2-8, 2007, "Molybdenum: oxide, recent trades US\$31.75 – 35.00/lb." This is a remarkable increase in the molybdenum price from US\$3-\$5/lbs since 2001.

DIAMONDS

1. WO Diamond Project, Lac de Gras, NWT

The bulk sample processing of 2,651 wet tonne recovered during the winter/spring 2006/2007 and diamond recovery at the Ekati sampling plant is proceeding as scheduled, with completion expected sometime in August.

Both Dentonia and Kettle River have agreed to contribute to the current cash call of \$546,888, equally, before the end of July thereby increasing their respective interests in DHK Diamonds Inc. to 40% each, which in turn has a 10.77% contributing interest in the WO diamond prospect.

2. Pellat Lake, North of the Ekati Mine, NWT

Peregrine, the operator, has completed 12 ground magnetic grids, totaling 345 line kilometers, and 3 HLEM grids, totaling 10.4 line kilometers and is currently evaluating the data in order to select drill targets. If drilling is warranted, and if a drill rig is available, drilling will begin sometime in August.

DHK Diamonds Inc. and Dentonia are currently being carried on this project by Peregrine, which has the right to earn 75% interest in any target, if such target is drilled and taken to production, at Peregrine's cost.

DIAMOND PRICES

An interesting article entitled "Novel Funds: From diamonds to stars", which appeared in the National Post, June 25, 2007, to quote:

"According to Mr. Wrobel, the stage is set for diamonds to soar in value. Diamonds have been lagging other commodities, but the environment in terms of supply and demand is now ready to drive pricing higher, he said in a telephone interview from London."

GOLD

Dentonia is awaiting the evaluation of a high resolution airborne magnetic and VLF-EM survey and a ground magnetometer and Max Min II survey over the Lipton claim block of the Atkinson gold prospect, Ontario, before committing to a 16 hole drill program.

RESIGNATION OF R. H. MCMILLAN

Dentonia has accepted R. H. McMillan's resignation as director and vice president exploration.
