For Immediate Release
TSX Venture: "DTA"

Atkinson Gold Project, Lipton Claim Block, Detour Lake Mine Area, Porcupine Mining Division, Ontario below James Bay

Overview

Dentonia Resources Ltd. ("Dentonia") holds four properties (3,680 hectares) under option to acquire 100% interest, subject to a 2% royalty, in the Detour – Atkinson area of Northern Ontario, 15 to 20km south-east of the Detour Lake Mine, at the northern margin of the Abitibi Greenstone Belt. During the period February 6, 2006 to March 23, 2006, a total of 1,493.0 meters of diamond drilling was completed in ten holes on the Lipton claims, which are part of the Atkinson Gold Prospect.

In 1996. Better Resources, in the same general area as the foregoing drilling took place intersected 10.7 g/t Au over a core length of 9.0 meters, hosted within a sequence of felsic tuffs, felsic intrusive rocks, and cherty graphitic chemical sedimentary rocks.

Dentonia's diamond drilling was successful. Seven of the ten holes completed, intersected anomalous concentrations of gold greater than 500 ppb. Holes L-06-5, 6,7,8,9, and 10 intersected gold mineralization in mafic volcanic flows located above the mineralized zone intersected by the 1996 drilling with the highest concentration of gold, in that zone being 6.17 g/t over a core length of 1.0 meters, from hole L-06-10. The gold is commonly associated with trace levels of iron sulphides and thin quartz veins.

A second zone of mineralization was intersected in holes L-06-7, 8, and 9 at or near the contact between the mafic to intermediate volcanics and the underlying felsic volcanic rocks. The best intersection was located in hole L-06-7 with a concentration of 14.01 g/t Au over a core length of 7.7 meters. The gold was hosted in felsic tuffs, and felsic intrusive rocks located immediately below the chemical sedimentary unit.

Details

Dentonia has been advised by Paul R. Nicholls, P.Eng. (Ontario), under whose supervision and direction the exploration at Atkinson is being carried out, that a detailed magnetometer survey was completed on a portion of the Lipton claims on April 7, 2006.

The survey lines were spaced at 50 meter intervals between lines 700N and 1,250N or over a distance of 550 meters with readings taken at 5 meter intervals along the lines between 200W and 900W or over a distance of 700 meters. The contoured results show northerly trending local magnetic highs within the wider more regional magnetic high.

This magnetometer survey was carried immediately north of the area drilled in February and March, 2006. A summary of samples intersecting significant gold concentrations (>500ppb) from the winter drilling program is presented in the table below:

Table 1 - Summary of Significant Assays (>500 ppb Au) Lipton Claims 2006

Hole	Easting	Northing	Sample #	From (m)	To (m)	Sample Length	Au (ppb)	Au (g/t)	Au (g/t)	Comment
L-06-4	-190	760	20766	72.50	74.00	1.5	626	0.65		Felsic Intrusive

			21033	112.00	113.00	1	65			Felsic Tuff
			21034	113.00	114.00	1	2860	2.74		Felsic Tuff
L-06-10	-582	846	20830	12.50	13.50	1	5807	6.17		Mafic Flow
			20831	13.50	14.50	1	890	0.86		Mafic Flow

A second split was taken from the rejects for all samples returning gold values greater than 5.0 g/t Au and assayed to check the results of the initial assay. The results are given below in Table 2.

Table 2: Check Assays

Hole	Sample #	From (m)	To (m)	Sample Length (m)	Au (g/t)	Au (g/t)	Au Check (g/t)	Au Check (g/t) – repeat	Au Average (g/t)
L-06-7	25886	96.50	97.50	1.00	17.21	17.83	18.21	19.27	18.13
	25887	97.50	98.50	1.00	74.71	77.42	58.94	61.89	68.24
	25893	103.30	104.20	0.90	14.54	15.22	18.10	18.00	16.47
L-06-10	20830	12.50	13.50	1.00	6.17		6.14	5.83	6.05

The check assay results are in the same order of magnitude as the initial results and confirm the high grades for holes L-06-7. Using the average of the check results and the initial results, the grade in hole L-06-7 is 13.52 g/t Au over 7.7 meters (uncut), or 8.54 g/t Au over 7.7 meters with sample 25887 (74.71 g/t Au) cut to 30 g/t Au.

In hole L-06-10, check assays confirm its grade and gave an average of 6.05 g/t Au over 1 meter.

Current Program

The staking of 35 additional claim units, approximately 560 hectares, to the north of area of the 2006 and 1996 drill programs, is in progress and re-sampling of the rejects and split core from 1996 drill program, still available, has been recommended.

Summer Program

An exploration program of 2,000 meters of core drilling, with helicopter support, consisting of eleven vertical and three angle holes, to depths of 140 meters, estimated to cost \$800,000, has been recommended. From data collected to date, it appears that the two mineralized zones are gently dipping to the north and west.

Dentonia has sufficient funds on hand to carry out this proposed program.
